Submitted (APR-2003) to the EMBL/GenBank/DDBJ databases.
-!- CAVITON: The sequence shown here is derived from an EMBL/GenBank/DDBJ whole genome shotgun (WGS) entry which is preliminary data.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          .

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Sequence 22, Application US/09309487

Patent No. 6335318

GENERAL INFORMATION:
APPLICANT: Selsted, Michael E.
APPLICANT: Tang, Yi-Quan
APPLICANT: Tang, Yi-Quan
APPLICANT: Ouellette, Andre J.
TITLE OF INVENTION: Antimicrobial Theta Defensins and Methods of Using Same
FILE REPERENCE: P-UC 3095
CURRENT APPLICATION NUMBER: US/09/309,487
CURRENT FILING DATE: 1999-05-10
NUMBER OF SEQ ID NOS: 31
SOFTWARE: PatentIn Ver. 2.0

Pacente 121, Application US/10141645

Patent No. 6713078

GENERAL INFORMATION:

APPLICANT: Alan Waring

APPLICANT: Alan Waring

APPLICANT: Alexander Cole

APPLICANT: Teresa Hong

TITLE OF INVENTION: Retrocyclins - Antiviral and

TITLE OF INVENTION: Antimicrobial Peptides

TITLE OF INVENTION: Antimicrobial Peptides

TITLE OF INVENTION: Antimicrobial Peptides

TITLE PEPERENGE: UCLA-001CIP

CURRENT APPLICATION NUMBER: US/10/141,645

CURRENT APPLICATION NUMBER: 60/284,855

PRIOR FILING DATE: 2001-04-18

PRIOR FILING DATE: 2002-04-18

NUMBER OF SEQ ID NOS: 125

SEQ ID NO 121

LENGTH: 118
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence 65, Application US/10141645
Patent No. 6713078
GENERAL INFORMATION:
APPLICANT: Robert Lehrer
APPLICANT: Alan Waring
APPLICANT: Alexander Cole
APPLICANT: Terest Hong
ITILE OF INVENTION: Retrocyclins - Antiviral and
ITILE OF INVENTION: Antimicrobial Peptides
FILE REPERENCE: UCLA-001C1P;

Sequence 55520, Application US/09270767

Patent No. 6703491

GENERAL INFORMATION:

APPLICANT: Homburger et al.

TITLE OF INVENTION: Nucleic acids and proteins of Drosophila melanogaster

FILE REFERENCE: File Reference: 7326-094

CURRENT APPLICATION NUMBER: US/09/270,767

CURRENT APPLICATION NUMBER: US/09/270,767

CURRENT APPLICATION NUMBER: US/09/270,767

CURRENT PATENTE PATENTING DATE: 1999-03-17

SOFTWARE: Patentin Ver. 2.0

LENGTH: 96

TYPE: PRT

CREANISM: Drosophila melanogaster

CS-09-270-767-55520
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Query Match

hypothetical protein C06A1.6 - Caenorhabditis elegans

A; Molecule type: DNA

```
Probable membrane protein YJL064w - yeast (Saccharomyces cerevisiae)
N.Alternate names: hypothetical protein HRC131; hypothetical protein J1120
C,Species: Saccharomyces cerevisiae
C,Species: Saccharomyces cerevisiae
C,Species: Sacharomyces cerevisiae
C,Species: Sacharomyces cerevisiae
R,Vandenbol, M.; Durand, P.; Dion, C.; Portetelle, D.; Hilger, F.
Yeast 11, 57-60, 1995
A,Title: Sequence of a 17.1 kb DNA fragment from chromosome X of Saccharomyces cerevisiae
A,Reference number: S50798; MUID:95282514; PMID:7762302
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           C;Accession: B45878

"cDNA cloning of three alpha-defensins and three demidefensins from
rebsus monkey bone marrow."

Submitted (SEP-1999) to the EMBL/GenBank/DDBJ databases.

-! FUNCTION. Microbloidal activity against Cram-positive bacteria

S. aureus and L. monocycogenes, Gram-negative bacteria S. typhimurium
and E.coli ML35 and fungi C.albicans and C.neoformans in vitro.

-! SUBNITI: Heterodimer of subunit A and subunit B linked by a
disulfid bond at position 66 forming a cyclic RTD-1.

-! TISSUE SPECIFICITY: Bone marrow; promyelocytes, myelocytes and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  SEQUENCE FROM N.A., SEQUENCE OF 65-73, AND MASS SPECTROMETRY.
